

Project: “Writers and Quotes”

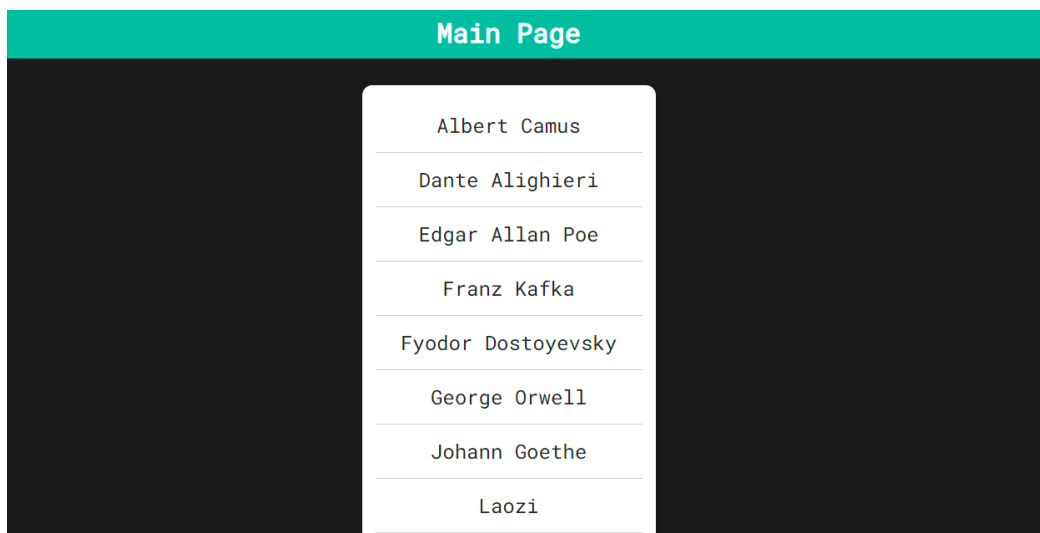

Description:

First project, used Django Framework, basic HTML and CSS.

For starting page, we got the list of famous writers, each writer with his own quote and main page to redirect at starting page.

URL path: /writers/

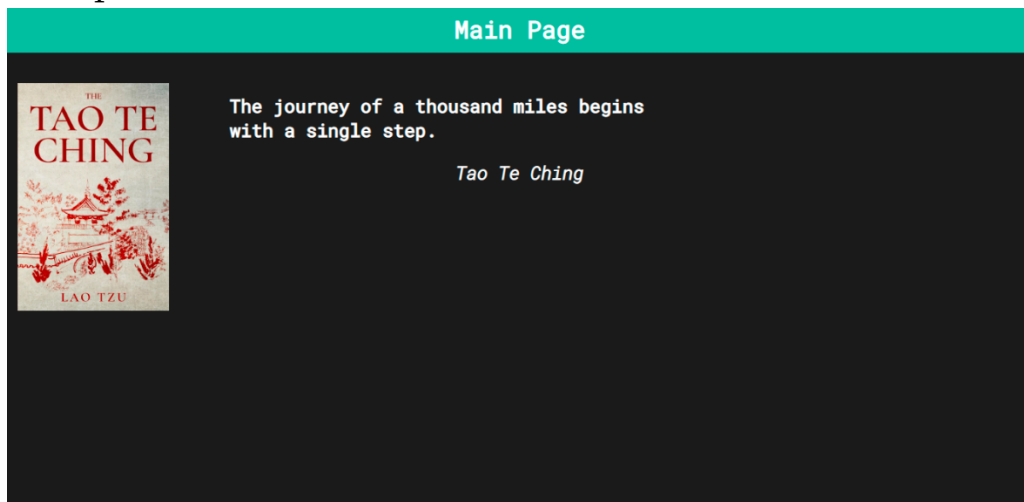

Example:

After clicking on a writer, you are redirected to a page, where you can see the quote, the title of a book and the cover page of a book written by author.

URL path: /writers/name of the author

Example:

Also it is possible to choose quote by the number and you will be redirected to a specific author's page.

Example:

URL path: /writers/2 - - - > This path will be redirected to path of a second author, in our instance it is Dante Alighieri and the path will be /writers/DanteAlighieri

If you choose invalid number for the quote 404 error will be arisen.
